

TISSUPOR Wound Pad®

A New Concept for Chronic Wounds

Bischoff
ST.GALLEN · SCHWEIZ

Promotes the healing of chronic wounds

- Chronic venous insufficiency
 - Peripheral occlusive arterial disease
 - Diabetes mellitus
 - Decubitus ulcers
- Through its targeted, innovative 3-D structure TISSUPOR Wound Pads promote the angiogenesis and the formation of granulation tissue.
 - Increases the blood flow by mechanical stimulation of the wound while changing the wound pad.
 - Reduces treatment costs thanks to less frequent changing of the dressings.
 - Simple application and integration into existing therapeutic concepts.
 - First coloured wound care product worldwide: The psychological aspect assumes special importance thanks to the attractive colour of the product.

**Promotes Angiogenesis
Enhances Granulation
Induces Micro Stimulation**
